✦ Simplified Clinical Summary

Hello. We have comprehensively analyzed your blood report. We noticed that some parameters (Elevated: Neutrophils, HbA1c, Fasting, Total Cholesterol, LDL, Triglycerides, ALT, AST, TSH, C-Reactive Protein, Low: Hemoglobin, Platelets, HDL) are outside the standard reference range. There is no need for immediate alarm. Maintaining a balanced diet, staying well hydrated, and scheduling a review with your physician to discuss these findings is highly recommended. Additionally, we noticed a temporary pattern of elevated systemic inflammation and dipping platelets, which suggests your body is actively fighting off an infection. This is a normal defense mechanism; please rest well, stay hydrated, and follow up with your doctor.

■■ Multi-Biomarker Disease Risk Patterns

- **Metabolic Syndrome Pattern (Cardiovascular & Diabetes Risk)**
- **Iron Deficiency Anemia (Low Oxygen Carrier Pattern)**
- **Hypothyroidism Pattern (Underactive Thyroid Activity)**
- **Hepatic Cell Stress (Liver Function Inflammatory Risk)**
- **Acute Inflammatory/Infectious Response Pattern**
- **Atypical levels detected in: HbA1c, HDL, LDL, Triglycerides. Please review with your physician.**
